

Tech Times

Friday, October 17

To make sure everyone has access to the latest information in regards to educational technology, I will be creating a simple newsletter to send out at the end of every other week. These will be short and to the point newsletters that will at least keep you informed of what changes, updates or new things are out there for use in the classroom. I will also occasionally include a way for you to leave feedback about what topics you would like included.

1. [Google Classroom Updates](#) - Some updates were made this week to make Google Classroom more manageable from the teacher end.
2. [gMath Add-On for Google Docs/Sheets](#) - Insert graphs and equations into a Doc, edit previous equations, or create a Google Form with equations/graphs inserted.
3. [Exitticket](#) - formative assessment tool: Deep assessment tool that gives you quick access to how students are learning.
4. [Kaizena updated](#) - voice comments on a Google Doc: Kaizena is now an Add-on in Google Docs for easier commenting.
5. [Commenting/Suggesting in Google Docs](#) - Basics for leaving feedback in a Google Doc using built-in features.
6. [Google Search Tools and Strategies](#) - post by Richard Byrne about how to search better. (for teachers and students)

And don't forget you can find lots of curated articles about digital tools, Google Apps and formative assessment on my [Flipboard page](#).
